

DIABETES and your HEART

A program of the National Institutes of Health and the Centers for Disease Control and Prevention

2 out of **3** people with diabetes die of heart disease or stroke.¹

According to the CDC, up to

20%

of deaths from heart attack

and

13%

of deaths from stroke are related to diabetes or prediabetes.

If you have diabetes, you are **2–4 times** more likely to have heart disease or a stroke than if you do not have diabetes.¹

Smoking doubles the risk of heart disease in people with diabetes.²

ABCs of Diabetes

A for the A1C test.

The **A1C test** shows you what your blood sugar (glucose) has been over the last three months. High blood sugar levels can harm your heart and blood vessels, kidneys, feet, and eyes.

B for blood pressure.

High blood pressure makes your heart work too hard. It can cause heart attack, stroke, and kidney disease.

C for cholesterol.

One kind of **cholesterol**, called LDL, can build up and clog your blood vessels. It can cause heart attack or stroke. Ask what your cholesterol numbers should be.

Ask your health care team:

What your A1C, blood pressure, and cholesterol numbers are;

What your ABC numbers should be; and

What you can do to reach your ABC goals.

Tips to reduce your risk for heart disease.

Maintain a Healthy Weight

Make Healthy Food Choices

Stay Active

Quit Smoking

Know Your **ABCs** of Diabetes

Talk to your health care team about how to manage your A1C, blood pressure, and cholesterol. This will help lower your chances of having a heart attack, a stroke, or other diabetes problems.
